doctors*

T-LAB FINE CANNULA

Flexible
and
Firm

- Less Trauma
- Wider inner diameter
- Easier injection
- High quality Japanese Steel

Less Trauma, more efficient injection

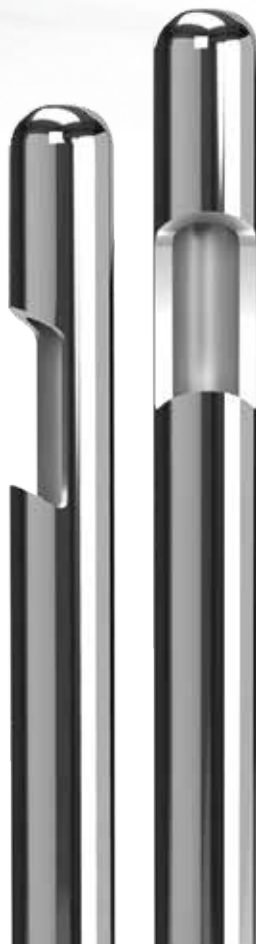

T-LAB FINE CANNULA

Each cannulas come with a marker to better monitor the depth at which you inject inch by inch. With its firm but flexible property you can easily maneuver to the desired direction you are looking to perform injection.

The special tip design offers less bleeding bruising, swelling. The large inner provides an easier injection as well as a high patient comfort.

Owing to Micro polishing technology, these cannulas have up to a 60% wider inner diameter than ordinary cannulas, this offers a fast and easy dermal filler injection.

The special dome-shaped design of the blunt tip facilitates movement between tissues therefore keeping damage to capillaries and surrounding tissues to a minimum. In this way, it maximizes patient comfort while minimizing the effects of bleeding, swelling and bruising unlike standart cannulas.

MODELS

Choose the size you need.

- 22G → 50mm / 70mm,
- 25G → 40mm / 50mm,
- 27G → 25mm / 50mm
